

B. Perform sorting of an array in descending order.

```
Ans => function sortDescending(arr) {  
  arr.sort(function(a, b) {  
    // Compare b to a for descending order  
    if (a < b) return 1;  
    if (a > b) return -1;  
    return 0;  
  });  
}
```

// Example usage

```
var numbers = [5, 2, 9, 1, 5, 6];  
sortDescending(numbers);  
console.log(numbers); // Output: [9, 6, 5, 5, 2, 1]
```
